Robocom Systems Demonstrates Commitment to Distributors with the Latest Release of their Next Generation® ERP Software

Farmingdale, NY and Markham, ON, July 1, 2013. Robocom Systems International just announced the release of the latest version of their Next Generation® distribution software, a comprehensive ERP solution for wholesalers and distributors. This release features enhancements that improve all modules of the system, with a focus on delivering management controls, visibility, and an enhanced user experience.

The new version empowers Executive and Operations Management to gain further insight into key daily business activities via the enhancement of existing Next Generation® management controls. This increased visibility to critical information can be experienced in multiple new displays, such as: Aged Payables, Aged Receivables, Booked Orders, Invoiced Orders, No Sales, Order Status, Inventory Control, Recommended Replenishment Action, and Route Management.

"Providing business leaders with the information they need to make timely decisions is critical in today's competitive distribution environment," says Fred Radcliffe, Robocom President. "We believe this release of Next Generation® provides easy access and clear visibility of the information that business leaders need to manage and control their distribution operations."

In addition, a number of system interfaces have been updated to provide the user with a seamless experience: Due to customer demand, a streamlined and more user-friendly Purchase Order Entry process has been implemented. The new user experience also incorporates an expanded use of icons—with context-sensitive tooltips—along with a Toolbar feature that can be configured based on user preferences. Lastly, the ability to view and save reports in PDF format has been included to provide much-needed report flexibility.

Reflecting on the user interface updates, Fred Radcliffe commented, "The enhanced user experience provided in this release 7.00 of Next Generation® will improve user productivity… and that productivity will be reflected in the distributor's bottom line."

About Robocom
Robocom Systems International has focused for over 30 years on developing and implementing Supply Chain Execution software solutions.
